

# Vocal Physical Therapy for The Performance Voice

## A Practical Course for Physiotherapists

*Proudly in association with Physios in Sport and Pure Sports Medicine*

Do you work with professional voice users and performing artists? Are you looking to expand your manual skills and help your artists achieve a more sustainable performance and voice?

Join us for Vocal Physical Therapy for the Performance Voice, a three-day, hands-on course designed to equip you with the foundational knowledge and practical skills needed for the musculoskeletal evaluation and treatment of the professional larynx.

This course will teach you how to:

- Effectively evaluate and treat the musculoskeletal components of the professional and performing artist's larynx.
- "Unload" the larynx using manual therapy techniques.
- Enhance a singer's postural and biomechanical set up for a more sustainable voice.

These hands on techniques help you "tune up" the performance voice so your clients may achieve their full vocal potential.

Presented by Titled Sports and Musculoskeletal Physiotherapist **Annie Strauch**  
B.Phty (Hons), M. Phty (Sports & Exercise), M. Phty (Musculoskeletal)
